2.	<p><b>D1</b>, which is considered the closest prior art, discloses (the references in parentheses relate to said document):</p> <p>Radial fan (1) with a housing (2) and an impeller mounted therein, an air inlet (4) and an air outlet (5), wherein a pressure chamber is configured between the latter,</p> <p>from which the subject matter of independent <b>claim 1</b> differs in that:</p> <p>in front of the air inlet a laminar element is arranged which, in a bypass (8) configured therein, comprises a sensor (9) for detecting at least one parameter of the medium flowing through the air inlet (4).</p>

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
<b>2.1</b>	The subject matter of <b>claim 1</b> is therefore novel (PCT Article 33(2)).
<b>3.</b>	The problem addressed by the present invention can therefore be considered that of indicating a radial fan of the aforementioned kind in which as exact a measurement of quantity as possible is achieved in a cost-effective manner so as to enable subsequent control according to requirements.
<b>3.1</b>	<p>The solution to this problem proposed in <b>claim 1</b> of the present application involves an inventive step (PCT Article 33(3)) for the following reasons:</p> <p>arranging the laminar element (7) in front of the air inlet (4) causes the flow to be quasi-laminar, irrespective of the rotation speed and other device parameters. The special placing of the sensor for detecting a parameter of the medium flowing through the air inlet (4) enables predominantly fault-free detection of the desired parameters.</p>
<b>4.</b>	<b>Claims 2–13</b> are dependent on <b>claim 1</b> and therefore likewise meet the PCT novelty and inventive step requirements.
